Our 17 year history assures best practice in privacy, security and the ethical use of data

We all have a responsibility to use data for good

Privacy

- We have built our business based on privacy by design principles for the past 17 years
- Quantum has strict protocols around the receipt and storage of personal information
- All information is de-identified using an irreversible tokenisation process with no ability to re-identify individuals.

Security

- We are ISO27001 certified - internationally recognised for our ability to uphold best practice standards across information security
- We use 'bank grade' security to store and process our data
- Comply with 200+ security requirements from NAB, Woolworths and other data partners
- All partner data is held in separate restricted environments
- All access to partner data is limited to essential staff only
- Security environment and processes regularly audited by our data partners.

Ethical use of data

Applies to all facets of our work, from the initiatives we take on, the information we use and how our solutions impact individuals, organisations and society.

Quantum believes in using data for progress, with great care and responsibility. As such please respect the confidence nature of this document.

Grow chips through targeted activation and selective trial rollout

Answer first: three actions for the next six months

01

Win the growth segment

Target Mainstream young singles/couples with branded secondary displays. Prioritise Tyrrells and Twisties, with added visibility in the lead-up to Christmas.

02

Protect the volume base

Use value bundles for older and young families. Avoid blanket discounting: the target segment already pays a higher unit price.

03

Scale proven layouts

Roll out the trial design in stores resembling 77 and 88. Investigate store 86 execution and pricing before another controlled test.

01

Category growth strategy

Three customer pools account for one-quarter of category sales

Budget older families lead sales; Mainstream young singles/couples are the clearest growth target

Largest sales pool

Budget older families: \$157k, or 8.7% of annual chip sales.

Growth target

Mainstream young singles/couples: \$148k and the largest buyer base.

Seasonal opportunity

Transactions rise before Christmas; use gondola ends or promotional displays ahead of the holiday closure.

Family volume and young-mainstream pricing drive category spend

Sales = customers × units per customer × average price per unit

Family volume

Older and young families buy more units per customer—protect them with value and bundle mechanics.

Price resilience

Mainstream young and mid-age singles/couples pay significantly more per unit ($p < 0.001$).

Commercial implication: target offers by mission; do not use a category-wide price cut.

Tyrrells and Twisties are the strongest target-segment plays

Affinity compares the target segment's unit mix with all other chip buyers

Brand activation

Off-locate Tyrrells and Twisties in high-traffic discretionary space; keep price architecture premium.

Pack-size caveat

270g leads pack affinity, but only Twisties sells this size—do not generalise the effect to other brands.

Measure incremental units, margin and repeat purchase against matched controls.

02

Trial store performance

Matched controls isolate trial impact from normal variation

Controls were selected on seven pre-trial months of sales and customer trends and scale

77 → 233

Very strong match across sales and customer behaviour.

86 → 155

Strong match; suitable for diagnosing customer-versus-sales response.

88 → 237

Good match; remaining uncertainty is reflected in the rollout safeguards.

Method: equal-weight composite of Pearson correlation and month-normalised magnitude similarity.

Roll out in stores like 77 and 88; investigate store 86 before retesting

A successful store cleared statistical and commercial thresholds in at least two of three trial months

Store 77 — ROLL OUT

Sales +26%; customers +23%. Growth came from reach, not more transactions per shopper.

Store 86 — INVESTIGATE

Customers +14% but sales were not consistently material. Check pricing, deals and execution.

Store 88 — ROLL OUT

Sales +12%; customers +6%; transactions/customer +6%. Scale to similar stores with monitoring.
